

**Integration as a Service**

# Connect Your Enterprise with Intelligent Automation

**Unify your enterprise with AI-driven connectivity. Integrate systems, data, and workflows through a single intelligent integration layer.**

## BACKGROUND

Enterprises today operate on dozens of applications across cloud, on-prem, and legacy environments. But as systems multiply, integration becomes the biggest barrier to digital transformation. When data is locked in silos and workflows cannot talk to each other, organizations lose speed, visibility, and operational consistency.

Anubavam's Integration as a Service (IaaS) provides a modern, AI-augmented integration layer that unifies applications, APIs, and data pipelines, creating a connected enterprise foundation that can scale with change.

## CHALLENGE

Teams spend months building integrations that break easily, demand constant upkeep, or rely on scarce engineering bandwidth.

Common problems include:

- Fragmented systems and isolated departmental data
- High integration costs and long delivery timelines
- Manual mapping, transformation, and troubleshooting
- Inconsistent APIs and incompatible legacy systems
- Limited real-time visibility into data and process flows

Without a smarter approach, integration becomes a long-term bottleneck instead of an accelerator.

## SOLUTION

Integration as a Service provides a cloud-native, AI-powered integration fabric that simplifies connectivity across the enterprise. It automates complex tasks, standardizes APIs, and ensures every application, workflow, and data source communicates reliably.

### Core Capabilities

- **AI-Driven Data Mapping:** Automates schema matching, transformations, and error detection
- **Pre-Built Connectors:** For ERP, CRM, HR, analytics, and IT systems
- **API Management:** Design, publish, secure, and monitor APIs
- **Event-Driven Integrations:** Trigger actions and data flows in real time
- **Data Orchestration:** Sync data across cloud and on-prem systems
- **Self-Healing Workflows:** AI detects and fixes integration failures automatically

## HOW IT WORKS

The platform sits as a unified layer between enterprise systems. It connects applications through secure APIs and connectors, orchestrates data movement, and applies AI to improve reliability. As processes run, embedded analytics highlight performance, latency, and bottlenecks — giving IT leaders full visibility into integration health. This creates a resilient integration foundation that adapts as new tools, teams, and business models emerge.

## SECURITY & COMPLIANCE

Integration as a Service is secured by design:

- End-to-end encryption for data in motion and at rest
- Role-based access controls and tokenized API credentials
- Compliance with GDPR, HIPAA, SOC 2, ISO 27001
- AI-assisted anomaly detection for suspicious patterns

## BUSINESS OUTCOMES

Organizations using IaaS report:

- Up to 70% faster integration development
- Real-time visibility across systems
- Lower operational overhead via automated governance
- Faster rollout of digital products and workflows
- Improved reliability with fewer integration outages

## WHY ANUBAVAM

Anubavam brings deep expertise in enterprise architecture, API engineering, and AI-driven automation. Our in-house frameworks allow organizations to modernize integrations without rebuilding systems, while our domain knowledge ensures smooth adoption across finance, education, healthcare, and enterprise IT environments.

Unify your systems with intelligent, AI-powered integration.
